

VENDOR-NEUTRAL SENSOR FUSION SOFTWARE*Helping organizations trust what they're seeing before they have to act.***Selected for the Department of National Defence IDEaS Counter-UAS Sandbox · CFB Suffield · September 2026*****Sensors detect. SkyFuse reconciles. Operators decide.*****Open standards. Vendor neutral. Canadian owned.****OVERVIEW**

SkyFuse is a software-defined sensor-fusion and operational-awareness platform for counter-UAS (C-UAS), intelligence, surveillance and reconnaissance (ISR), and critical-infrastructure protection. It provides a vendor-neutral interoperability layer that reconciles RF, electro-optical, acoustic, and future sensor inputs into a trusted operational picture. Rather than replacing existing sensors, SkyFuse enables organizations to integrate and reconcile data from the systems they already own — reducing operator workload while improving confidence in time-critical decisions.

OPERATIONAL CHALLENGE

Modern counter-UAS and ISR operations rely on multiple independent sensors that frequently produce conflicting tracks, classifications, and confidence levels. Operators must reconcile these differences before taking action, resulting in:

- Increased operator workload
- Slower response times
- Reduced confidence in decisions
- Vendor lock-in through proprietary fusion
- Difficulty integrating new sensor technologies

CORE CAPABILITIES

- Confidence-weighted fusion logic
- Multi-sensor track correlation
- RF, electro-optical & acoustic integration
- SAPIENT-compliant fusion node (BSI Flex 335 v2.0)
- TAK / CoT interoperability
- Edge deployment on laptop-class & ruggedized systems
- Vendor-agnostic architecture

ENGINEERING EVIDENCE

- ✓ Multi-sensor fusion demonstrated across RF, electro-optical, and acoustic inputs
- ✓ Confidence-weighted reconciliation engine operational
- ✓ Integrated with TAK using Cursor-on-Target (CoT) messaging
- ✓ Implemented against the published SAPIENT (BSI Flex 335 v2.0) specification and verified through end-to-end local testing
- ✓ Initial RF testing conducted using real emitters and drone control links
- ✓ Selected for the DND IDEaS Counter-UAS Sandbox (September 2026)

CURRENT FOCUS

- Operational evaluation at the DND IDEaS Counter-UAS Sandbox
- Policy-aware fusion
- Provenance and auditability
- Additional sensor integrations
- Defence partnerships

VISION***SkyFuse develops vendor-neutral software that helps operators trust what they're seeing before they have to act.***

By reconciling data from multiple sensors into a single operational picture, SkyFuse improves operator confidence while enabling interoperability across existing and future systems.
